

Phillipe Augusto

Senior Unity Game Engineer • C# • Gameplay Systems • Architecture

phillipe.a.a.mendonca@gmail.com | Uberlândia, Brazil | phillipeaam.itch.io | linkedin.com/in/phillipe-augusto
github.com/phillipeaam

SUMMARY

Senior Unity Game Engineer with 8+ years of software development experience, including several years building and shipping Unity/C# games and live player-facing products. Experienced designing and maintaining gameplay systems, game states, UI, reusable architecture, content pipelines, backend integrations, performance-sensitive systems, and internal development tools. Comfortable working within established codebases, debugging and profiling production systems, collaborating across disciplines, and taking features from technical design through implementation, optimization, release, and production support.

EXPERIENCE

Ello, *Unity Software Engineer*

2022 – 2025 | Remote — United States

Joined Ello as Employee #15 at a Y Combinator-backed startup, helping build and operate Read with Ello, a live Unity mobile product, and later contributing to Learn with Ello, a Python-based AI learning product.

- Owned the development and evolution of the primary content-library experience, integrating GraphQL services, downloadable content, progression, cover presentation, and reusable pooled UI components.
- Helped design and ship the Quest System from product discovery through production, connecting progression, rewards, backend services, UI, and player-facing feedback.
- Redesigned content-loading workflows using multithreaded processing, caching, pooling, and optimized asset preparation, improving startup and content-loading performance across hundreds of books.
- Implemented a GPU-assisted image-processing workflow that converted multi-megabyte source assets into lightweight runtime thumbnails, reducing download size and memory usage.
- Built modular Unity systems and content pipelines using Scriptable Objects, Addressables, custom Editor tooling, Spine 2D, reusable configuration workflows, and player-facing UI.
- Developed reusable GraphQL infrastructure that simplified query configuration, validation, and integration of server-driven data into Unity features.
- Investigated and resolved mobile, memory, UI, asset-loading, audio, and platform-specific production issues across iOS and Android.
- Frequently served as Release Owner for weekly production deployments, coordinating release documentation, Git tags, App Store submissions, validation, and cross-functional communication.
- Used Claude Code in production during the later development of Read with Ello and Learn with Ello to support code analysis, implementation, debugging, refactoring, and technical documentation across Unity/C# and Python codebases.

Instituto Alfa e Beto, *Senior Unity Game Developer*

2017 – 2022 | Uberlândia, Brazil

Developed and shipped multiple production Unity games for mobile devices, working across gameplay, UI, content systems, tools, performance, persistence, and release support.

- Designed reusable gameplay foundations shared across dozens of activities, including minigame lifecycles, gameplay state, HUD behavior, results flows, progression, dialogue, hints, timing, audio sequencing, animation, and scene transitions.
- Implemented player-facing mechanics and responsive feedback systems combining interaction, progression, animation, audio, UI, and configurable gameplay content.
- Created Unity Editor tools, Scriptable Object architectures, reusable components, and content pipelines that accelerated the configuration and delivery of games and downloadable content.
- Refactored and maintained large Unity projects across gameplay managers, loading systems, UI controllers, tutorials, catalogs, profiles, and legacy modules.
- Built offline-capable systems for content, player progression, activity tracking, reports, persistence, AssetBundles, and synchronization.
- Profiled and optimized runtime behavior, asset usage, loading, and memory for lower-end mobile devices.
- Collaborated with designers and artists to translate gameplay and content requirements into reusable Unity features and production-ready systems.

Cedro Technologies, *Mobile Software Developer*

2015 – 2017 | Uberlândia, Brazil

- Progressed from UI implementation into ownership of production features involving API integration, local persistence, performance improvements, and technical decision-making.
- Worked directly with clients and stakeholders to gather requirements, evaluate solutions, and deliver production software.
- Represented Cedro as an embedded engineer at Instituto Alfa e Beto, contributing to a client relationship that later led to direct employment by the organization.

Algar Tech, *Support Analyst*

2013 – 2015 | Uberlândia, Brazil

- Supported production environments involving infrastructure, databases, backups, incidents, and operational services, building a strong foundation in debugging and production reliability.

SELECTED SHIPPED UNITY GAMES & PRODUCTS

Ilhas do Alfabeto — Instituto Alfa e Beto | Unity Mobile Game [↗](#)

Flui — A Cidade das Palavras — Instituto Alfa e Beto | Unity Mobile Game [↗](#)

Tabuada na Fazenda — Instituto Alfa e Beto | Unity Mobile Game [↗](#)

Craque da Leitura — Instituto Alfa e Beto | Unity Mobile Game [↗](#)

Read with Ello — Ello | iOS & Android | Live Unity Mobile Product [↗](#)

TECHNICAL SKILLS

Performance & Production

Unity Profiler • Memory Optimization • Asset & Loading Optimization • Object Pooling • Mobile Performance • Release Management • App Store Workflows

Gameplay & Unity

Unity • C# • Gameplay Systems • Gameplay Architecture • Game States • Player Progression • UI Toolkit • uGUI • Scriptable Objects • Addressables • AssetBundles • Spine 2D • Animation & Audio Integration • Editor Tooling • Cinemachine

Software Engineering

Object-Oriented Design • SOLID • Design Patterns • Modular Architecture Multithreading • Async Workflows • Refactoring • Debugging • Git

Backend & Data

REST APIs • GraphQL • Firebase • Feature Flags • Client/Server Integration • Local Persistence • Offline Systems

AI-Assisted Development

Claude Code • OpenAI Codex • ChatGPT • Unity MCP • Unity CLI

EDUCATION

Systems Analysis and Development, UNIPAC — Universidade Presidente Antônio Carlos [↗](#) Uberlândia, Brazil

LANGUAGES

English — Professional Working Proficiency

Portuguese — Native
